## Multiple Choice Questions

20 × 0.5 marks = 20 marks

|                                                                                                             |                                                       |                                                                               |                                              |
|-------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|-------------------------------------------------------------------------------|----------------------------------------------|
| <b>1. In which year was the Linux kernel first invented/released?</b>                                       |                                                       |                                                                               |                                              |
| a) 1991                                                                                                     | b) 1989                                               | c) 1993                                                                       | d) 1995                                      |
| <b>2. Which symbol is used to represent "no permission" in the ls -l output?</b>                            |                                                       |                                                                               |                                              |
| a) x                                                                                                        | b) -                                                  | c) 0                                                                          | d) n                                         |
| <b>3. Which command in the vi editor is used to save changes?</b>                                           |                                                       |                                                                               |                                              |
| a) :wq                                                                                                      | b) :q!                                                | c) :w                                                                         | d) :x                                        |
| <b>4. Linux kernel was originally developed by:</b>                                                         |                                                       |                                                                               |                                              |
| a) Dennis Ritchie                                                                                           | b) Richard Stallman                                   | c) Ken Thompson                                                               | d) Linus Torvalds                            |
| <b>5. What does the -v flag mean in the tar command?</b>                                                    |                                                       |                                                                               |                                              |
| a) Verbose                                                                                                  | b) Verify                                             | c) Version                                                                    | d) Visual                                    |
| <b>6. What does the pwd command actually display?</b>                                                       |                                                       |                                                                               |                                              |
| a) Name of the current working directory                                                                    | b) The absolute path of the current working directory | c) The relative path of the current working directory from the home directory | d) The list of all directories in the system |
| <b>7. A file has permission 754. What is the symbolic representation of the group's permission?</b>         |                                                       |                                                                               |                                              |
| a) rwx                                                                                                      | b) r--                                                | c) r-x                                                                        | d) rw-                                       |
| <b>8. Which of the following represents the first partition of the second SATA/SCSI hard disk in Linux?</b> |                                                       |                                                                               |                                              |
| a) /dev/sda1                                                                                                | b) /dev/sdb2                                          | c) /dev/sda2                                                                  | d) /dev/sdb1                                 |
| <b>9. Which command is used to change file permissions in Linux?</b>                                        |                                                       |                                                                               |                                              |
| a) chmod                                                                                                    | b) chown                                              | c) chgrp                                                                      | d) chperm                                    |
| <b>10. The command cp -r is used to:</b>                                                                    |                                                       |                                                                               |                                              |
| a) Move files recursively                                                                                   | b) Copy directories recursively                       | c) Rename files                                                               | d) Compress files                            |
| <b>11. What is the full form of GNU?</b>                                                                    |                                                       |                                                                               |                                              |
| a) General Networked Utility                                                                                | b) Global Network Utility                             | c) GNU's Not Unix                                                             | d) GNU's Native Unix                         |

**12. The gzip command compresses a file and gives it which extension?**

|         |         |         |        |
|---------|---------|---------|--------|
| a) .zip | b) .tar | c) .bz2 | d) .gz |
|---------|---------|---------|--------|

**13. The permission rwx-w-r-- in numeric (octal) form is:**

|        |        |        |        |
|--------|--------|--------|--------|
| a) 724 | b) 742 | c) 720 | d) 704 |
|--------|--------|--------|--------|

**14. Which command lists all currently mounted filesystems?**

|       |          |          |         |
|-------|----------|----------|---------|
| a) df | b) mount | c) lsblk | d) fsck |
|-------|----------|----------|---------|

**15. Aman wants to set permissions such that the group gets read and write only, the owner gets full permissions, and others get view (read) only. Which command is correct?**

|                       |                       |                       |                       |
|-----------------------|-----------------------|-----------------------|-----------------------|
| a) chmod 674 filename | b) chmod 746 filename | c) chmod 764 filename | d) chmod 467 filename |
|-----------------------|-----------------------|-----------------------|-----------------------|

**16. Which command correctly creates an archive named backup.tar containing the files report.txt and data.csv?**

|                                            |                                            |                        |                                            |
|--------------------------------------------|--------------------------------------------|------------------------|--------------------------------------------|
| a) tar -cvf report.txt data.csv backup.tar | b) tar -vcf report.txt data.csv backup.tar | c) tar -cvf backup.tar | d) tar -vcf backup.tar report.txt data.csv |
|--------------------------------------------|--------------------------------------------|------------------------|--------------------------------------------|

**17. Which command will decompress a compressed archive file (Compressed using gzip)?**

|                       |                         |                        |                       |
|-----------------------|-------------------------|------------------------|-----------------------|
| a) gunzip file.tar.gz | b) ungzip file.tar.gzip | c) gunzip file.zip.tar | d) ungzip file.tar.gz |
|-----------------------|-------------------------|------------------------|-----------------------|

**18. Which command is used to remove a non-empty directory?**

|          |          |        |          |
|----------|----------|--------|----------|
| a) rmdir | b) rm -r | c) del | d) erase |
|----------|----------|--------|----------|

**19. Linux is based on which earlier operating system's design principles?**

|            |           |         |        |
|------------|-----------|---------|--------|
| a) Windows | b) MS-DOS | c) UNIX | d) VMS |
|------------|-----------|---------|--------|

**20. Which command safely unmounts a filesystem?**

|            |           |          |           |
|------------|-----------|----------|-----------|
| a) unmount | b) detach | c) eject | d) umount |
|------------|-----------|----------|-----------|
